SCULPTURAL IMAGING™

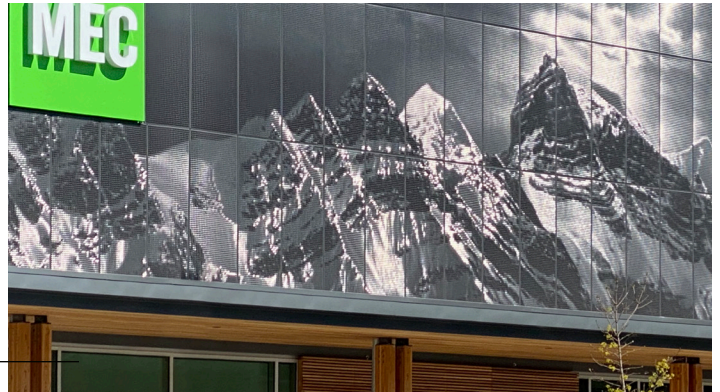

The Sentinel
West Vancouver, BC Canada

Surfaces with aesthetic intelligence.

CREATIVITY + PERFORMANCE

Ombrae is unlike any image-based facade technology available. It does not rely on traditional paint, printed inks, or 2D perforations. Instead, the Ombrae System is a reflected light technology, utilizing 3D pixels - OpticalTiles™. Images and designs created with Ombrae appear almost holographic, having three dimensional dynamic effects. Movement and changing natural lighting conditions or controlled lighting designs engage viewers in uniquely compelling ways, drawing them into memorable experiences of truly limitless potential.
