PLANK PROFILE

Aluminum Facade Panel

Low gloss coatings can be applied to resemble natural terracotta or fiber cement finishes

Project: *Concord Pacific - Hillside West* | Location: Burnaby, BC, Canada
Architect: James K.M. Cheng Architects / Buttjes Architecture

P L A N K P R O F I L E

The KPS Plank Profile is available in two formats: 1) a nominal 8" wide extruded aluminum profile, or 2) custom formed profiles in widths between 8" to 18". The deep reveal connection accentuates the divisions between the planks. The robust wall thickness of the aluminum delivers an exceptionally flat surface without oil-canning. It is suitable for Rainscreen wall application, and is particularly effective for soffits — especially where a powdercoated woodgrain finish is desired. Custom colours are also available, including matches to natural terracotta or fiber cement finishes.

- Suitable for Rainscreen walls & soffits
- Robust Aluminum thickness remains exceptionally flat
- Deep reveal to accentuate the planks
- Woodgrain finishes and custom colours available
- Compatible with thermally improved clips
- Noncombustible
